

VMware Delivers VMware vSphere™ 4, A Quantum Leap Forward

VMware vSphere 4 to Help Customers Transform IT into a Dynamic, Flexible Service, While Dramatically Lowering Costs.

the global leader in virtualization solutions from the desktop through the datacenter and to the cloud, today announced the general availability of VMware vSphere™ 4, delivered ahead of schedule and with the support of an extensive partner ecosystem and customers around the globe.

VMware vSphere 4 extends the previous generation VMware platform – VMware Infrastructure 3 – along three dimensions: it delivers the **efficiency** and performance required to run business critical applications in large scale environments, it provides uncompromised **control** over application security and service levels, and it preserves customer **choice** of hardware, OS, application architecture and on-premise vs. off-premise application hosting. VMware vSphere™ Business Editions

Leverage the power of virtualization to transform your IT infrastructure into private clouds built on VMware vSphere enabling IT to increase control through service-level automation. VMware vSphere, the industry's first cloud operating system, dramatically reduces capital and operating costs and maximizes IT efficiency with the freedom to choose any application, OS, or hardware.

VMware vSphere Licensing Changes

With the release of VMware vSphere 4, VMware has introduced a fully redesigned licensing experience. The key improvements and enhancements in VMware licensing are as follows:

- License keys are simple 25-character strings instead of complex text files.
- License administration is built directly into VMware vCenter Server. Customers receive only one single license key for a given vSphere edition (e.g. Advanced).
- The same vSphere license key can be used on many VMware ESX hosts.
- It is no longer using the VMware Infrastructure 3 licensing server or licensing model. [Click here](#) to read more.
